

Market Perspective Report

Markets Adapt to
Persistent Disruption

Worley Insights

Report ID: WI-MPR-25092026-R00

AUGUST 2026

Introduction

Market Perspective Report is a curated, targeted look at changes in the oil and gas, renewable fuels, midstream, refining, and downstream industries. These market sectors are strongly interconnected and to fully understand changes in one requires an understanding of what is happening in other sectors.

Our consulting team – with deep backgrounds in markets, pricing, regulations, policy and technology – has created a report that spans the hydrocarbon value chain from oil and gas to refined products and petrochemicals while also covering important developments in renewable fuels. We provide a perspective on key economic trends to provide a framework for understanding market movements. We choose a special topic every month to provide a deeper dive on topics of particular interest. We report market developments and changes relevant and important to decision makers. We back up our analysis with charts and figures based on our in-house models.

The Worley Insights' Market Perspective Report has been used for over a decade to inform and support our internal decision makers, and strategic planners. Based on client interest, we are now making the report available to our clients. For any comments, questions, or request to cover special topics, please contact the editor.
